World leading Automotive Finance Captive selects WCG as preferred global solution provider

White Clarke Group, an Associate Member of Eurofinas, has announced a deal with a world leader in auto finance, with initial implementation already begun in China and Brazil.

After a long selection process WCG had been chosen as the global solution provider for what is already Europe's largest automotive vehicle financial services organization, extending globally to over 1.9 million new and used cars financed across its worldwide operation.

Today's announcement will underpin our client's ambitious growth plans for these regions, while helping to control costs and manage risk in the world's fastest growing leasing territory. The system will span retail, fleet and wholesale operations.

"These latest contracts mark our strategy of expansion into the BRIC territories and we expect to be making further announcements shortly. They also reaffirm our technology leadership with a true multi country, currency and language solution," says Brendan Gleeson, Global Sales & Marketing Director at WCG. "The Chinese marketplace has very significant cultural differences from the rest of the world but the component-based architecture of CALMS² makes it ideally suited to meet the challenges fully."
